

I want to submit my strong opposition to the vaccine passport. There is ongoing and continual evidence that the science continues to change, evolve, and reverse that brings pause to the true efficacy of a covid vaccine. There are multiple studies that indicate the way in which the vaccine has been used en masse is contradictory to good science and a strong historical understanding of pathology. There are side effects that our current media and politicians won't share or even acknowledge. There is a concerning level of negative impact on ovaries, and therefore menses, caused by the spike protein that seems to be targeting women and girls ovaries. There is strong evidence based on valid studies that indicate the large portion of the population should not be vaccinated. There is strong evidence of political interference with the truth. There is strong evidence of the goal of financial gain being the driving force behind what you are calling "the science". The FDA recognized a need for a study with their own hypothesis that the people with multiple vaccines are more likely to contract the omicron variant. Just like our very own county councilman. There is strong evidence that the T cell count immediately after receiving a vaccine is lowered putting us at a HIGHER risk of contracting COVID. Do not force our businesses to police medicine. Do not force our community to make a choice based on inconvenience versus strong and true science, or lack thereof. Stop mixing politics with medicine. Let the scientists do their job and start policing businesses that make unethical decisions in order to make more money.
